

Culligan Quench Case Study | Healthcare

Clean, Safe, and Reliable Water and Ice Solution for Southern Cancer Medical Center

Culligan Quench provides filtered water coolers and chewable ice machines to top cancer treatment facilities.

The Challenge

- A well-renowned cancer center in Florida needed a more convenient, cost-effective, and safer solution to bottled water delivery to properly hydrate staff, visitors, and patients.
- These medical facilities wanted a higher quality hydration solution for cancer patients to enjoy chewable ice and filtered water.

The Solution

- Installation of 232 Culligan Quench machines, including Q8, Q12, 956, and 965 machines, at 100 corporate and medical locations in Florida, after a successful 30-day trial.
- Clean and reliable filtered water and ice is now available to staff and patients, where hydration and ice are extremely important to patients receiving cancer treatments.

“Culligan Quench’s NSF/ANSI certified water filtration options paired with touchless dispensing really provide peace-of-mind for healthcare facilities as they care for patients and their staff.”

— Culligan Quench Water Expert

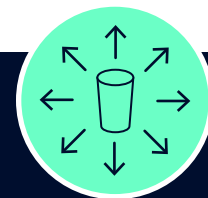

Results

As the medical group grows, Culligan Quench plans to install 100+ more machines

Peace of mind that potential outside contaminants from constant water deliveries are decreased

Readily available endless filtered water and chewable ice for patients, medical staff, and visitors

The Story

Known for its excellent cancer treatment and clinical research, a top cancer treatment facility in Florida was seeking a reliable partner to offer clean, cold drinking water and ice to patients to help ease treatment symptoms without the inconvenience of bulky and heavy 5-gallon jug delivery. Culligan Quench was a natural partner with state-of-the-art water filtration and sanitization technologies offered in a wide variety of bottleless water and ice dispensers.

After a successful trial with a Q8, a touchless dispensing bottleless water cooler, the cancer treatment center saw an increase in water drinking among patients and staff. Upgrading to a high-capacity touchless dispensing bottleless water cooler, the Q12 and adding the 956 and 965 water and ice dispenser, the cancer treatment center wanted to expand to every location.

To ensure each facility had a smooth installation of a Culligan Quench machine that met that facility's water and ice demand, Culligan Quench Water Experts visited every single of the 100 locations in Florida to conduct site surveys. Soon after that, Culligan Quench machines were installed in most corporate offices and medical buildings within each cancer center. With Culligan Quench's continued determination to provide excellent service, the medical group plans to install 100+ more Culligan Quench machines in new locations.

Background

Hospitals and medical facilities need a reliable supply of clean, filtered water and ice for their patients, guests, and busy staff. Culligan Quench's broad selection of bottleless water and ice systems and state-of-the-art filtration and sanitization technologies including NSF/ANSI certified filters to remove sediment, reduce chemical contaminants, and eliminate off-tastes and odors provide an easy sustainability win, eliminating plastic water bottles and 5-gallon jugs.
